

How to prepare for mosquito and tick spray around your home.

Before Application:

Remove toys, pet food and water dishes and any bedding in the application area. Make note of important items that need to be covered or avoided, such as wellheads, play structures, pet living or sleeping areas, vegetable gardens, and sensitive plants. Keep doors and windows closed and turn off air conditioning unit.

During Application:

Avoid going out for at least 2 to 3 hours after spraying.
We do not apply when it's too windy.

After Application:

Please wait for spray to dry and dissipate before going out.

Since Safety is our # 1 Priority, we will email you a house prep sheet before spraying.

We are very kid and pet friendly, and safe. We will always pick up toys and pet food dishes around the yard and then put them in safe environment every time before we spray.

We eliminate all areas of the yard and home that are a breeding ground for mosquitoes.

We then spray in areas that are safe to your home and family and pets.
